

Channel Backup

Install Ahsay v7 Backup Agent

Install Backup Agent on Server

Log in to your server and open a web browser to <https://cbs1.outlookinthecloud.com>

In the top right there is a download icon to download the agent.

Select the type of download required.

Channel Backup

The difference between the online and offline versions are, the online version downloads an installer that connects the web to complete the install. The offline version is a complete .exe that can be used multiple times with no internet connection.

Save, run and install the file.

Once installed, start the application and select

Enter the login details created when creating your account and select advanced options

Here enter the <https://cbs1.onlinetackinthebus.com/URL>

Channel Backup

Select OK and Ok

Here you are presented with the new backup agent options. Next select BackupSets

Add backupset and Name the backupset, chose the type of backup required. Files or MSSQL etc.

Channel Backup

Next choose “I would like to choose the files to backup” in the bottom of the window.

Choose the folders / files required for backup

Select Next and choose a time to run the backup by selecting the backup schedule or by adding a new schedule.

Select next and choose a backup destination.

Select the + add new storage destination / destination pool

The default storage location is selected for you. If the Azure Storage is not available, please login to <https://cloudstrong.servermanagerpro.com> and edit the account modules by selecting and deselecting a module and save as discribed at the bottom of the document [here](#).

Channel Backup

Select OK, Next and next

Choose your data at rest encryption type.

I have selected the user password.

Confirm the password and run your backup.
